

Laptop Sleeve Transferring Instructions

Read these instructions completely before you begin.

Supplies Needed

- Laptop Sleeve (Neoprene)
- Heat Tape
- Heat Gloves

Step 1: Adjust the Heat Press

Oven Temperature: **400° F**
Dwell Time: **45 seconds**
Pressure: **Firm**

Note: These instructions, including transfer times and temperatures, are based on the inks, paper, ovens and products we use. Your inks, papers, etc. may require adjustments in your time/temp settings.

Step 2: Design and Print Your Transfers

Prepare your artwork in the normal way, taking into consideration the size of the imprintable sleeve. You can find the design template at www.laserreproductions.com/Design-Templates.html. Bear in mind that you need to **mirror the image** to ensure it will be right-reading once it's printed. Most printers refer to this as "Flip Horizontal" or "Mirror".

Step 3: Transfer the Image

1. Insert cardboard provided inside laptop sleeve, between printable side of sleeve and inner seam. This is necessary to avoid imprinting being affected by the bulk of the inner seam.
2. Place the laptop sleeve **face-down** against the transfer, and secure it using heat resistant tape.
3. Carefully flip over and place the laptop sleeve on the heat press with the transfer on top.
4. Be sure that the zipper is hanging off the edge and does not come in contact with the heat press.
5. Insert provided cardboard inside laptop sleeve. This is necessary to avoid imprinting being affected by the bulk of the inner seam. Be sure to insert cardboard between printable side of sleeve and inner seam.
6. Press at **400° F** for **45 seconds** using **Firm** pressure.
7. Remove transfer while hot.

Transfer Tips and Washing Instructions

- Avoid inhaling heated laptop sleeve. Place a fan near the heat press to reduce fumes when press is opened.
- Use a wet cloth with mild detergent to gently wipe the surface of the Laptop Sleeve when cleaning.
- Laptop Sleeves should not be washed in the washing machine or soaked in water.
